Links in PDF

There are two types of links in PDF: a link to a specific position in the same PDF document, and a link to an external document. The internal-destination property of fo:basic-link indicates to link to a position in the same document. Its destination may be either an ID or a page number. The external-destination property indicates to link to an external document. Its destination may be either an external file or a website.

Linking to an internal destination

Linking to an ID : Specify internal-destination="Link-01" on the link; specify id="Link-01" on the link's destination.

Linking to a page number (page 2) : internal-destination="2"

Linking to a page number (page 2) and setting the display ratio (200%) : internal-destination="2#zoom=200"

Linking to an external destination

Linking to an external file (attachment-sample-1.pdf). : external-destination="./attachment-sample-1.pdf"

Linking to a website (https://www.antennahouse.com/) : external-destination="https://www.antennahouse.com/"
